## COMMISSION IMPLEMENTING REGULATION (EU) 2016/2070

of 14 September 2016

**laying down implementing technical standards for templates, definitions and IT-solutions to be used by institutions when reporting to the European Banking Authority and to competent authorities in accordance with Article 78(2) of Directive 2013/36/EU of the European Parliament and of the Council**

(Text with EEA relevance)

THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Directive 2013/36/EU of the European Parliament and of the Council of 26 June 2013 on access to the activity of credit institutions and the prudential supervision of credit institutions and investment firms, amending Directive 2002/87/EC and repealing Directives 2006/48/EC and 2006/49/EC<sup>(1)</sup>, and in particular the third subparagraph of Article 78(8) thereof,

Whereas:

- (1) The focus of the competent authorities' assessments or of the European Banking Authority's ('EBA') reports may change over time and therefore benchmarking portfolios may need to change accordingly. The design of the general template for defining benchmarking portfolios should take this into account and should therefore allow for defining benchmarking portfolios in various compositions and degrees of granularity.
- (2) The second sentence of Article 78(2) of Directive 2013/36/EU allows a competent authority to develop, in consultation with the EBA, specific portfolios for assessing the quality of institutions' internal approaches, in addition to the common EBA portfolios. Rules should be provided for defining the templates for the reporting to the EBA, which should also apply to the specific portfolios that have been developed by a competent authority.
- (3) A clustering approach should be used for credit risk, whereby the credit risk portfolio is decomposed into sub-portfolios with roughly similar risks across institutions. This allows for a provision of analyses by competent authorities and EBA on comparable exposures and ensures a minimum level of uniformity between the portfolios of different institutions. Having regard to the categories of risk present in most of the internal approaches of institutions and to the categories for defining own funds requirements for credit risk, the clustering for the benchmarking exercise of Article 78 of Directive 2013/36/EU should encompass exposures to corporates, credit institutions, central governments, small and medium-sized enterprises ('SMEs') included in the retail category ('retail SMEs'), SMEs not included in the retail category ('corporate SMEs'), as well as exposures secured by residential mortgages and exposures to the construction sector, with additional clustering based on the place of residence of the counterparty, the collateralisation characteristics, the default status or the industry sector.
- (4) A more granular benchmarking of internal approaches of institutions requires a specific sample approach to low default portfolios, whereby the benchmarking is applied at the exposure level and at the transaction level. However, given that this specific sample approach focuses on a subset of an institution's real exposures only, and is therefore not very representative, it should be used only as a complement to the clustering approach.

<sup>(1)</sup> OJ L 176, 27.6.2013, p. 338.

- (5) The complexity of the benchmarking exercise requires a progressive use of portfolios that refer to the internal approaches used to calculate risk-weighted exposure amounts for credit risk. For market risk, the portfolios used in benchmarking exercises of the Basel Committee on Banking Supervision ('BCBS') and of EBA in 2013 should be used as a starting point for developing the set of portfolios for the benchmarking exercise required by Article 78 of Directive 2013/36/EU, with only minor adaptations to maintain the portfolio validity. This will minimise the burden to institutions and competent authorities and avoid a duplication of efforts.
- (6) Article 78 of Directive 2013/36/EU also requires the competent authorities to assess the quality of the internal approaches and the degree of variability observed in particular approaches. The competent authorities' assessment should therefore not focus only on the internal approaches' outcome but also on the key variability drivers and should draw conclusions from the different modelling approaches and options that institutions use in their internal approaches. Institutions should therefore also be required to report the results of the use of historically observed risk parameters for credit risk and their profit-and-loss time-series for market risk.
- (7) A meaningful assessment of the effect of each approach used for market risk requires that the institutions report the main risk modelling assumptions to the competent authorities and that the competent authorities assess the effect of each choice in isolation, where Regulation (EU) No 575/2013 of the European Parliament and of the Council <sup>(1)</sup> provides them with options to choose the modelling assumptions. It is therefore necessary to perform alternative calculations for the value-at-risk ('VaR') to control the different possibilities that institutions can apply and that are explicitly mentioned in that Regulation. To that end, institutions using a Historical Simulation approach for VaR should also deliver a one-year profit-and-loss data series for each one of the individual portfolios modelled.
- (8) When reporting on market risk, the institutions should provide an initial market valuation of each individual instrument to assess whether they understood the instrument correctly. That will also ensure that institutions introduce the positions in their systems. The institutions should also report the initial market valuation to their competent authorities and the EBA ahead of the portfolio-modelling outcome, on which the assessment of the risk-weighted exposure amounts referred to in Article 78(3) of Directive 2013/36/EU will be based.
- (9) To ensure that the competent authorities and the EBA have a clear view of the range of values that are used for risk-weighted assets and for own funds requirements that arise under internal approaches for similar exposures, the institutions should report to competent authorities the results of internal approaches that have been applied to benchmark portfolios covering a wide range of exposures.
- (10) Article 78(3) of Directive 2013/36/EU requires competent authorities to assess the internal approaches that they have permitted institutions to use for the purpose of calculating risk-weighted exposure amounts or own funds requirements. The benchmarking exercise should therefore only relate to validated internal approaches. An institution should not provide data for portfolios that include instruments or risk factors that are reported under the standardised approach.
- (11) An institution that is able to model an instrument included in one of the benchmarking portfolios for market risk and that has received permission from its competent authority to use an internal approach to calculate the risk-weighted exposure amount or the own funds requirement for that type of instrument, should report all the relevant data for that instrument as required by this Regulation, irrespective of whether the institution has such instrument in its books at the time of reporting. However, if an institution that has received the abovementioned permission lacks adequate experience in modelling a specific instrument and has therefore not received its management's approval to model the instrument, it should not provide data on the individual portfolios that include the instrument, as this would risk corrupting the resulting dataset. In such cases the institution should report the portfolios that will not be included in their data submission and provide the reasons for their exclusion.
- (12) Any long-term IT solution for the reporting for the benchmarking exercise under Article 78(2) of Directive 2013/36/EU should offer an institution the possibility to report directly to EBA. However, EBA has been established recently and has limited resources, which limits its capacity to receive reports by institutions directly. An interim IT solution should therefore be established until those problems have been solved. To avoid that an interim solution creates disproportionate burdens on reporting institutions, consistency with other types of

<sup>(1)</sup> Regulation (EU) No 575/2013 of the European Parliament and of the Council of 26 June 2013 on prudential requirements for credit institutions and investment firms and amending Regulation (EU) No 648/2012 (OJ L 176, 27.6.2013, p. 1).

reporting by institutions should be ensured and in particular with the IT solution that is referred to in Article 17 of Commission Implementing Regulation (EU) No 680/2014 <sup>(1)</sup>.

- (13) Since institutions are already required to report information in accordance with Implementing Regulation (EU) No 680/2014, it would be disproportionate to require them to report immediately all of the information referred to in Article 78(2) of Directive 2013/36/EU. To provide them with sufficient time to implement appropriate internal reporting frameworks, while at the same time ensuring that they carry out a meaningful benchmarking exercise, the portfolios to be assessed as regards credit risk internal approaches should be introduced gradually.
- (14) The remittance dates for the information that needs to be reported should be set in a manner that gives institutions sufficient time to perform the necessary calculations.
- (15) This Regulation is based on the draft implementing technical standards submitted by EBA to the Commission.
- (16) EBA has conducted open public consultations on the draft implementing technical standards on which this Regulation is based, analysed the potential related costs and benefits and requested the opinion of the Banking Stakeholder Group established in accordance with Article 37 of Regulation (EU) No 1093/2010 of the European Parliament and of the Council <sup>(2)</sup>,

HAS ADOPTED THIS REGULATION:

Institutions are requested to document their calculations and provide the documents to their competent authority upon request.</li> </ul> <p>The ILTV categories are the following:</p> <p>(a) <math>\leq 25\%</math>;</p> <p>(b) <math>&gt; 25\% \leq 50\%</math>;</p> <p>(c) <math>&gt; 50\% \leq 75\%</math>;</p> <p>(d) <math>&gt; 75\% \leq 100\%</math>;</p> <p>(e) <math>&gt; 100\% \leq 125\%</math>;</p> <p>(f) <math>&gt; 125\%</math>;</p> <p>(g) Not applicable.</p>

**COMMON INSTRUCTIONS**

An institution shall apply the following:

- a) Unless explicitly specified otherwise in the portfolio description, all positions shall be booked 15 October 2015. Once positions have been booked, each portfolio shall age for the duration of the benchmarking exercise. Furthermore, calculations shall be done under the assumption that the institution does not take any action to manage the portfolio in any way during the entire period of the benchmarking exercise. Unless explicitly stated otherwise in the specifications for a particular portfolio, strike prices for option positions shall be determined relative to prices for the underlying as observed at market close on 15 October 2015.
- b) For the purpose of the pre-benchmarking exercise validation, the valuation of each portfolio shall be submitted to the institution's competent authority by 30 June 2016. The exact timing of the valuation shall be 26 October 2015, 5.30 pm CET.
- c) The risks of the positions shall be calculated without taking into account the funding costs associated with the portfolios
- d) To the extent possible, counterparty credit risk shall be excluded when valuing the risks of the portfolios.
- e) The 10-day 99 % VaR shall be calculated on a daily basis. Stressed Value-at-Risk ('sVaR') and the Incremental Risk Charge ('IRC') may be calculated on a weekly basis. sVaR and IRC shall be based on end-of-day prices for each Friday in the time window of the benchmarking exercise.
- f) For each portfolio, results shall be reported in the base currency of the portfolio as provided in the sections below.
- g) For transactions that include long positions in Credit Default Swaps ('CDS'), assume an immediate up-front fee is paid to enter the position as per the market conventions.
- h) It shall be assumed that the maturity date for all CDS in the benchmarking exercise follows conventional quarterly termination dates, often referred to as 'IMM dates'.

- i) Additional specifications needed in order to carry out pricing calculations required for CDS positions shall be done in a way that is consistent with commonly used market standards.
- j) The maturity date (for example, some options expire on the third Saturday of the month) that ensures that the transaction is closest to the term-to-maturity specified shall be used. For material details of the product specification that are not explicitly stated in this document, the assumptions that have been used (day count convention, etc.) shall be provided along with the results.
- k) The abbreviations ATM, OTM and ITM refer to a derivative's moneyness (i.e. the relative position of the price of an underlying with respect to the strike price of that derivative). ATM stands for 'at the money', OTM stands for 'out of the money', and ITM stands for 'in the money'.
- l) All options shall be treated as if they are traded over-the-counter ("OTC") unless explicitly specified otherwise in the portfolio.
- m) The standard timing conventions for OTC options shall be followed (i.e. expiry dates are the business day following a non-trading day). For example, a 3-month OTC option booked on 15 October 2015 expires on 15 January 2016. If options expire on a non-trading day, adjust the expiration date per business day, in accordance with common market practices.
- n) All OTC options shall be treated as:
  - American for single name equities and commodities; and
  - European for equity indices, foreign exchange and swaptions.
- o) For all options the premium from the initial market value calculations shall be excluded (i.e. options shall be considered as 'naked').
- p) For the positions denominated in Euro but composed by one or more instruments denominated in a different currency, the Initial Market Valuation ('IMV'), VaR, sVaR and IRC shall be converted in Euro using the appropriate foreign exchange ('FX') spot rate at the end of the booking date (15 October 2015).
- q) When booking all positions, appropriate market convention shall be followed unless otherwise specified in the instructions applicable to the portfolio.
- r) When an instrument is subject to a corporate action (a call from the issuer, a default etc.) it shall be excluded from the portfolio along with any related CDS or option.
- s) The Euro Interbank Offered Rate ('Euribor') is the rate calculated by the European Money Markets Institute at different maturities for Euro interbank term deposits.
- t) The London Interbank Offered Rate ('Libor') is the rate calculated by the Intercontinental Exchange at different maturities for interbank term deposits in different currencies.
